

LANGLEY DENTAL PRACTICE

Do you feel that your existing partial denture is too bulky and uncomfortable?

- Are you having trouble with your rigid acrylic or metal denture?
- Do you feel uncomfortable with your denture because it is taking too much space in your mouth?
- Do you want more taste and food texture when eating?

Vertex Dental

If so, then the **Vertex Flexible Denture** is what you need!

Why a **Vertex Flexible Denture** makes sense...

1. **Aesthetics**

There are **NO METAL PARTS** in the denture which makes your smile more beautiful and natural. You can have smiles with no metal parts showing.

2. **Great speech**

Since it is small and thin, it barely affects your speech.

3. **Minimal coverage of the palate or roof of your mouth**

You can feel and taste your food better.

4. **Easier to adapt and lightweight**

Because it is so compact it takes little time to get used to.

5. **Virtually unbreakable**

Due to its great flexibility.

These dentures are available NOW at Langley Dental Practice!

Please ask your dentist or reception for details
